

$\mathbb{R}^2 \times \mathbb{R}^3 / \mathbb{Z}$ is a topological space. It is a quotient space of the product of the 2D Euclidean space \mathbb{R}^2 and the 3D Euclidean space \mathbb{R}^3 by the equivalence relation $(x, y) \sim (x, y + k)$ for $k \in \mathbb{Z}$.

$\mathbb{R}^2 \times \mathbb{R}^3 / \mathbb{Z}$

$\mathbb{R}^2 \times \mathbb{R}^3 / \mathbb{Z}$ is a topological space. It is a quotient space of the product of the 2D Euclidean space \mathbb{R}^2 and the 3D Euclidean space \mathbb{R}^3 by the equivalence relation $(x, y) \sim (x, y + k)$ for $k \in \mathbb{Z}$.

$\mathbb{R}^2 \times \mathbb{R}^3 / \mathbb{Z}$
